

Rodzilla Shooting Products Adjustable Shell Holder Kit

The Rodzilla Shooting Products shell holder kit attaches to the base of your T-Rex rest on either the right or left side allowing for your rounds to be placed in the most convenient location for loading without taking up space on your shooting mat.

The kit consists of a vertical shaft with a locking memory collar for height, a horizontal beam which holds the shell block, and all associated hardware to adjust holding friction.

Our shell block holds 20 rounds for record and up to 5 sighter rounds in a separate row to easily keep track of your rounds fired. From the drop-down box select: Standard, Magnum or both.

This design allows you to easily adjust the shell block with one hand while on the rifle. The final position you choose is then held by friction, so once your shells are in the desired position it stays in place throughout your string of fire.

For the original T-Rex bases produced before February of 2022, you will need to select “early style base” from the drop-down box when ordering. This kit will have a block that clamps to the base on either side for the vertical post to screw into.

Bases manufactured after February of 2022 will have tapped holes for the vertical post to screw into (one on the right and one on the left side of the base) and the blocks are not required (the pictures are of the new style base).
