

The Raptor base kit

If you own an original T-Rex front rest and would like to upgrade to the new light weight Raptor base, this kit is for you.

You save 6.5Lbs and 33% less size (size with legs rotated under the base is just 4" wide and 14.5" long

This kit consists of the new hard anodized aluminum base with 3-fold out legs and two new ceramic coated aluminum guide posts.

You only need to remove one bolt from your original T-Rex. This bolt is on the bottom of your steel base and locks the bridge assembly onto the base. To remove your bridge assembly from you steel base just remove this bolt. Now slide your bridge assembly up and off the vertical guide rods. Reverse this procedure to reinstall your bridge assembly on the new Raptor base and just replace the bolt you took off the original base.
